

The Build, Write, Say Method

is a multisensory approach to real-world math problems that creates multiple neural pathways and helps your student see and understand the math.

Build

Building with manipulatives:

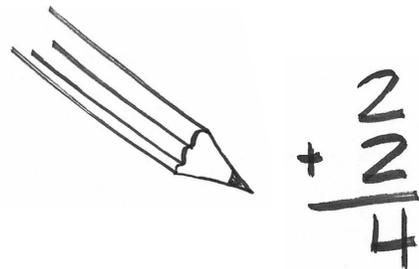

- brings abstract math concepts to life
- engages the motor cortex
- enables students to **see** the math

Write

Writing step-by-step solutions:

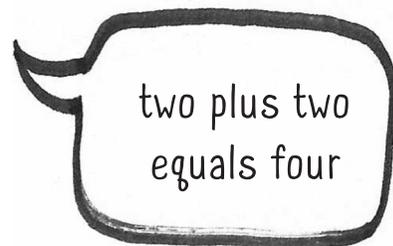

- helps solidify understanding
- stores numerical symbols in long-term memory
- engages fine motor skills

Say

Saying it out loud:

- involves auditory processing areas
- reinforces understanding and long-term retention
- demonstrates mastery

Why use this method?

This multi-sensory approach:

- leads to deeper learning
- develops mental images that improve retention
- strengthens connections between different parts of the brain
